

AN AUTOMATED WELLNESS INTERVENTION AGAINST **BURNOUT**

BURNOUT GUARD

Question

Have you ever regretted making a decision too quickly without considering the consequences?

The Problem

Burnout rates by profession

Share reporting burnout, most recent available data

Healthcare workers

The Solution

- An AI-powered n8n workflow that evaluates stress and pressure to support better decisions and lighten the workload.
- It analyzes calendar density to suggest breaks and stress-relief exercises.
- Aligns with SDG 3 Good Health & Well-being.

Who are the target users?

High-stakes, schedule-driven professionals who:

- Make decisions that can significantly affect others
- Work under sustained cognitive and emotional pressure
- Manage complex calendars with meetings, deadlines, and competing priorities
- May overlook early signs of burnout until performance or wellbeing is affected

Examples:

- Surgeons and hospital-based healthcare professionals
- Medical and operational leaders
- Executive leaders and decision-makers
- Managers in high-pressure, meeting-intensive environments

Who is excluded from the tool?

Not intended for:

- First responders: Unpredictable, emergency-driven work.
- Fixed-shift/manual workers: Limited schedule control.
- Students and casual users: Too little calendar complexity for meaningful analysis.

Demo

Why n8n and Gemini?

Why n8n?

- Visual workflow = easy to explain and debug
- Easy integrations with Google Calendar, Gemini and Gmail

Why Gemini AI:

- AI interprets schedules and suggests improvements.

Ethical reflection

- **Data privacy:**
 - Calendar titles, attendees, and times may reveal sensitive information.
- **Limited accuracy:**
 - The tool assesses calendar pressure not personal stress, emotional exhaustion, or work outside the calendar so it may underestimate burnout.
- **Non-medical guidance:**
 - Burnout is work-related, and the AI provides small, research-based wellness suggestions not medical treatment.
- **Technical failures:**
 - If the AI or an external service fails, a fallback sends a general wellness checklist instead.
- **Clear disclaimer:**
 - Every email states: "This automated briefing is an organizational nudge tool, not medical advice."

Learned lessons and struggles

Lessons:

- Automating with n8n
- Integrating Google solutions within n8n.

Struggles:

- Google integration in n8n required extensive setup, with account limitations caused by permission and staging issues.
